

In the Specification:

A substitute specification in both redlined and clean versions (pages 1-19 and page 34) accompanies this response. The changes are primarily to add paragraph numbering, to provide a short description of the figures and correct numbering of the figures and references. A few minor typographical errors also have been corrected, as indicated in the redlined version. Pages 20-33 of the specification listing the claims as originally submitted have not been provided in the redlined version or in the clean version because they follow in this document. Applicant does not intend to delete the original claims from the original specification and requests guidance if a different submission would be appropriate.
